6243	1"		1
6241	1 1/4"		1

Designed for Filters 3/4" - 1" - 1 1/4"

Power Mag-Filter

INSTALLATION INSTRUCTIONS

1

Place the insulation of the T-Piece on the insulation of the filter's body according to the elliptical slot

2

Place the set on the rear side of the magnetic filter

3

Follow steps 1 and 2 in order to place the insulation on the front side of the filter

4

Place the insulation of the impurities collection chamber on the lower side of the filter. Follow the internal niche of the draining valve's handle for correct fitting

5

Place the insulation cover cap on the top side of the filter

6

The insulation of the T-Piece can be rotated 360°, simultaneously to the rotation of the filter's T-Piece. The magnetic filter must always be placed vertically with the draining valve facing downwards

7

On the outer surface of the filter's insulation are 2 embossed slots, first over and second beneath the filter's body. Place there the velcro tapes to the slots in order to stabilize the insulation
